fruits of Opentin Cittorlin collected at Sante Barbara by Othe Tithmann San 1874 fruit with a few and the state of t the first the state of the stat

New Dosp, n. y, June 28 My dear sur, I send you today a høing joint of Bruntia, bearing abud, and am expanded flower. The plant was collected at Søttewille, Staten Island, n. Y. ou a field-day of the Govey Botanical Clubb. Ne carefully examined a large mundler probably 150, of the joints, and perhaps 30 flowers. no spines longer than three lines were found on any joint, and these were more of a light, than of a dark green Icolor, the leaves Reemed rather more appressed than spreading, but most of them were at an angle of about

45° from the joint, Reening thus to ble at a Kind Kompsvouwise between appressed and spreading. hove of the flowers had red centres. We concluded that I was the plant must be O. vulgaris, and mentioned the fact of finding it to mr. Leggett, who said that he thought Ovulgaris had never been found at far north and advised us to send some to your. Please let us Know, through the Bulletin, if agreeable to you, what the species is - ! Phelieve that Mr. Jos. Schrenk of College Point intends Rending you specimens from the Rame place. Hoping to Know the result of your determination soon, I ash Sours respectfully M. L. Britton, C. M.
